

Revlon 473 Heating Element Replacement

The heating element is located towards the back of the hairdryer in the head.

Written By: Jessica Leyva

TOOLS:

- [Digital Multimeter](#) (1)
 - [Phillips #2 Screwdriver](#) (1)
-

Step 1 — Shell

⚠ Before disassembly, make sure that the device is unplugged.

- Unscrew the two 17.83 mm black screws located on the handle.

Step 2

- Separate the shell from the main component.
- Make sure that the each piece is free from debris.

Step 3

- Continue to pull the components apart.
- ⓘ For reassembly, put the silver encasing on before the the black cover.

Step 4 — Heating Element

- The heating element is the group of tightly coiled bronze wires behind the vent hose as well as the silver coils.
- Make sure that there are no breaks or debris obstructing the wires of the heating element.

Step 5

- To test the heating element, use a digital multimeter.
- Set the multimeter to 200 under ACV.
- Bring the ends of the multimeter toward the two lead wires.
- If the circuit between the wires is closed, the numbers on the multimeter should keep changing.
- If the numbers are not changing, replace the heating element.
- If the circuit is closed, check the thermal cutout.

To reassemble your device, follow these instructions in reverse order.
